

Build consumer-grade ERP experiences with Eviden ElevateNow for SAP, powered by ServiceNow

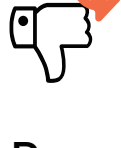

Modernize your workflows and scale innovation at every stage of the ERP journey.

ERP is the backbone of the modern enterprise, and over the years, organizations have invested heavily in their SAP customizations to align to their specific business needs. But as companies are seeking to modernize their user-base experience, complexities in the ERP core are creating:

Slow innovation

Heavily customized ERPs can slow innovation—impacting productivity and increasing the likelihood of disruption.

Poor user experiences

Complex systems of record are hard to manage and create suboptimal user experiences.

At-risk migration

Detecting, remediating, and rebuilding customizations is a lengthy and risky process without standardization.

Empower users with cutting-edge ERP from Eviden and ServiceNow.

Every organization is on a different journey. Whether you're focused on migrating from an on-premise ERP to a cloud-based solution like SAP S/4 HANA, or are prioritizing user experiences, Eviden and ServiceNow can help you achieve your business goals.

With ElevateNow for SAP, organizations can:

Achieve frictionless migration

Scale improvements and reduce migration risk with a seamless integration layer and standardized customization tools.

Improve accelerated adoption

Create a consumer-grade system of engagement that reduces complexity and allows end-users to adapt to changing demands.

Enhance resilient innovation

Innovate faster with a resilient digital services platform that enhances agility and minimizes process disruption.

ElevateNow for SAP takes ERP to the next level

with a discover, detect, and deploy approach.

DISCOVER

Leverage ERP Customization Mining to discover all customizations in SAP and rank candidates for re-platforming on ServiceNow.

DETECT

Identify opportunities to inject efficiency into your ERP processes.

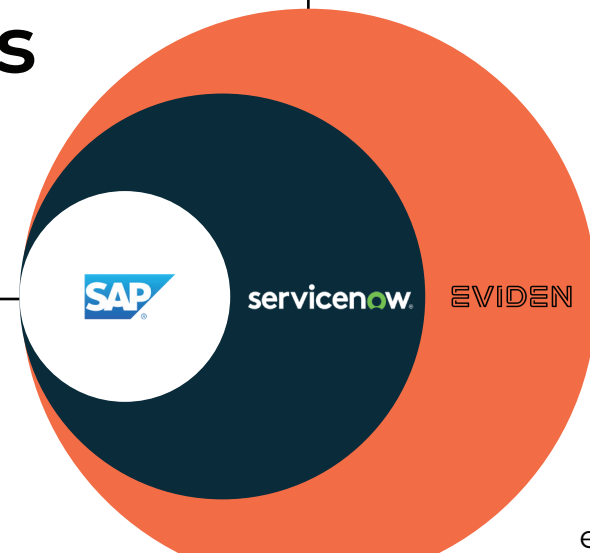

DEPLOY

Build and extend innovation for your ERP-dependent processes with ServiceNow App Engine and digital workflows.

Helping enterprises drive business outcomes

SAP is the system of record that powers the core of your ERP—optimizing your essential transactions and creating operational efficiency.

ServiceNow adds an elevated experience layer to SAP's established system of record. Its low-code/no-code engine allows you to manage and customize ERP integrations and workflows on the Now Platform, enabling seamless access to ERP data.

Eviden applies its digital expertise to coach you through your ERP journey—so you can build systems of differentiation that accelerate innovation without disruption.

Gain seamless access to ERP data with an SAP-ready solution.

With 100 SAP-ready Integration Hub actions and 24+ pre-defined data models, our complementary ERP Canvas translates SAP's custom codes in real time so that you don't have to. This allows you to build and extend innovation for ERP-dependent processes with more efficiency and agility.
