Built on ServiceNow Solution

Helping you protect the systems that power Europe

To stay at the forefront of the evolving cybersecurity threat landscape, regulations like the NIS2 are increasingly shaping digital sovereignty across Europe. With Eviden's JumpStart to NIS2 solution, Built on ServiceNow, organizations are able to approach NIS2 compliance with confidence.

Together, Eviden and ServiceNow deliver:

- 1 Centralized information management.** Gain clear insights into compliance standards and evidence requirements by consolidating data into a single, easy-to-read platform.
- 2 Risk mitigation.** Non-compliance with NIS2 can result in various penalties, ranging from compliance orders to criminal sanction. Reduce the risk of penalties by ensuring continuous compliance.
- 3 Cost reduction and enhanced security.** Tailored dashboards, regular updates, and specific reporting tools help organizations reduce operating costs. While heightening controls on high-risk vendors create a resilient and secure infrastructure.

Eviden is an Elite Partner with market leading CSAT scores, over 1,000 ServiceNow certifications, and a longstanding partnership of 15 years.

Built 100% natively on ServiceNow

Together, Eviden and ServiceNow can revolutionize your NIS2 compliance management with the Now Platform. Seamlessly connect people, functions, and systems across your organization, and visualize comprehensive compliance information using the NIS2 Workspace.

With Eviden's class-leading implementation and advisory services, you'll benefit from a rapid and robust NIS2 management solution aligned with industry best-practice.

Boost compliance

Gain visibility of IT infrastructure

Address data inaccuracies, rising costs of expanding asset registers, and unnoticed, unconsolidated legacy IT inefficiencies.

Enhance communication between Risk, Security and TPM

Address security and risk operational silos, manage risk and compliance across multiple systems and localized solutions, and ensure the compliance status of 3rd and Nth parties.

Augment resilience and continuity management

Address delays in compiling service, operations, risk, and security data. Ensure awareness of current and outdated service processes and systems—and avoid cumbersome execution of crisis plans and simulations.
